Android MeetingSDK v0.19 Release Notes (January 21, 2024)

NOTE:
Please see previous MeetingSDK Release Notes for an overview of what was introduced in earlier releases of the SDK.

API CHANGES

`public static String getTimeZone()`

Returns the time zone name (such as America/New_York) corresponding to the time zone the device is in.

CHANGES/FIXES

Fixed a problem where video sent from an Android tablet while in landscape mode may be garbled.

Miscellaneous fixes to the underlying audio/video engines

KNOWN ISSUES
While the ability to specify a dedicated Looper upon which all delegate methods are invoked, the current Android MeetingSDK does not attempt to create a dedicated Looper if one is not specified.   This will result in all delegate method calls being made on the same thread being used to parse low-level audio and video events coming from our audio/video engine.

The `VideoView.isScreenShare()` API call will likely return `true` for non screen-share video streams if they are being sent at 4K resolution.
